**GO GREEN AND
SAVE GREEN
WITH AE!**

Better Than Free

Most fleets have to deal with the

Fact that their drivers idle their vehicles for a significant amount of time each day. They do what they can to reduce it, but most drivers will let their vehicle idle anyway, at least for something "quick" which can often take 20-30 minutes.

Lets put some math to this problem. A common convention is that a vehicle uses 1 gallon of gas per hour of idling. Now lets assume a conservative 20 minutes of idling a day, per driver. A fleet that has 2000 vehicles is using 14,444 gallons of gas a month, just by idling. At \$2.70 per gallon, that is \$39,000 wasted every month!

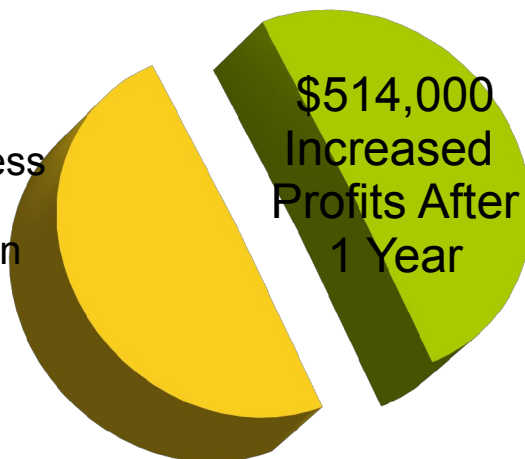

By using a built-in feature of our Auto Eclipse Wireless Laptop Disablers, you can save fuel costs and help decrease carbon emissions. Plus, *with the gas savings alone*, you can pay for your entire investment in Auto Eclipse in about a year! Add to that the hundreds of thousands of dollars you can save from fewer at-fault accidents, and **you can't afford NOT to use Auto Eclipse!**

AUTO ECLIPSE[^] Wireless LAPTOP DISABLER SAVINGS

Return On Investment After One Year.

\$1,014,000 Total Savings Annually!

Estimated Cost of Auto Eclipse Wireless Laptop Disablers Including Installation for 2000 vehicles

\$546,000

Savings from fewer Accidents

(Based upon actual data from Companies having about 2000 vehicles)

PLUS

\$468,000

Savings from Less Idling

(Based on 2000 vehicles idling 20min less per day per driver and a fuel consumption of 1gal/hr while idling)

After installing the Auto Eclipse Laptop Disabler with all it's features, A fleet of 2000 vehicles stands to potentially show an ROI in under 6 months and realize increased profits in the 3rd quarter! Profits potentially can increase by \$1 million annually!
