

How does the Wireless Laptop Disabler Work?

The Laptop disabler is a combination of Hardware and Software that determines if the vehicle is in park, and if not, will disable the PC.

The Hardware connects to your vehicle via a USB “Dongle” and communicates to the Vehicle Driver Safety System. The Vehicle Driver Safety System is the black box in the above image which connects to the vehicle and can monitor things such as when the vehicle is in Park, Seatbelt Usage, Headlight Usage, Blinker, Brake, and Emergency Brake Usage. It can also force the usage of the driver seatbelt and headlights, prevent vehicle theft, prevent runaway vehicles, and even decrease gas expenses by preventing excessive idling.

The Driver Safety System communicates all this information back to the PC, where the laptop screen is disabled when the vehicle is out of Park, and the software logs everything so that managers can see exactly what was going on in a vehicle. The hardware is about the same level of complexity to install a vehicle alarm system, and the software walks you through it's setup in just a couple of minutes.

The Software can be set to take any of these actions to disable the laptop:

- 1) Turn off the PC screen
- 2) Display an Auto Eclipse Screen Saver
- 3) Disable User input whilst still displaying the running program
(useful for first responders who need to view GPS maps).

Frequently Asked Questions

Q: What happens if you don't connect the “Dongle”? **A:** The laptop is disabled.

Q: What happens when the laptop is out of range of the vehicle? **A:** The laptop is enabled.

Q: How long does it take to install? **A:** Including the software, about two hours.

Q: Can the laptop be used away from the vehicle? **A:** Yes.

Q: What is the warranty? **A:** 1yr Limited, 3yr Limited Warranty available.

Q: Can users bypass it? **A:** Anything can be bypassed, the question is how hard is it to do. AE is very difficult to bypass, and it logs all events so that in the case of an accident, tampering is apparent.
